

Mighty Mix Dog Roll

How Much Should I Feed?

Dog Size	5kg	10kg	15kg	20kg
Amount	200g	350g	490g	590g

This is intended as a guide only, individual needs may vary depending on activity levels, age, breed and supplementary diet.

Puppies

For feeding the Dog Roll to puppies, it is recommended that you feed no more than 50% of their diet and make up the other half with one of our biscuit products. Nourish is most recommended for puppies but all of our biscuit formulas are 100% complete foods so suitable for growing pups.

When feeding - puppies should be allowed to self feed, within reason. What that means is that puppies should have as much as they want in about 10 minutes each feeding. If the puppy eats all you gave it in a couple of minutes give more food inside that 10 minute feed time. If the puppy leaves any after 10 minutes, remove the food and give them a little less at the next feed time. If the puppy is a gulper, you may need to feed them more often but a lower quantity in each feed. Don't free feed by leaving food down all the time.
